

Proposition 65 Compliance and Non-Use Declaration

Dear Customer,

April 13, 2023

Semtech Corporation, in cooperation with our suppliers, is continuously receiving industry standards regarding environmentally safe practices and processes. One such endeavor is compliance to California Proposition 65, also known as the "Safe Drinking Water and Toxic Enforcement Act of 1986" as it applies to any of the materials used in the fabrication or assembly of Semtech product

Currently, Semtech Corporation employs and maintains a fables business model whereby Semtech Corporation does not fabricate or assemble its product within the state of California. Semtech Corporation acknowledges that our product may find its way into California. Our due diligence has indicated that there are no substances identified by Proposition 65 which are used intentionally, added, or disposed in a manner which could potentially impact the environment or harm human beings.

A full listing of the substances imparted by Proposition 65 are listed below, updated February 25, 2022, with their No Significant Risk Levels (NSRL) and Maximum Allowable Dose Levels (MADL). These levels have been established in regulation in Title 27, Cal. Code of Regulations, Sections 25705, 25709 and 25805.

Semtech Corporation is confident that this declaration satisfies any concerns regarding compliance to Proposition 65 as it applies to Semtech product assembled in or shipped to California.

Sincerely,

A handwritten signature in blue ink that reads "Randy Biddle".

Randy Biddle
Manager, Corporate Quality Assurance
Semtech Corporation

Office of Environmental Health Hazard Assessment
Proposition 65 No Significant Risk Levels (NSRLs) for Carcinogens and
Maximum Allowable Dose Levels (MADLs) for Chemicals Causing Reproductive Toxicity

Below is a list of NSRLs and MADLs that provide "safe harbor" for businesses subject to the requirements of Proposition 65. These NSRLs and MADLs are established in regulation in Title 27, Cal. Code of Regulations, Sections 25705, 25709 and 25805. These safe harbor levels do not preclude the use of alternative levels, which can be demonstrated by their users as being scientifically valid. A hyperlink is provided for those NSRLs or MADLs for which the documentation of their derivation is electronically available.

Proposition 65 No Significant Risk Levels (NSRLs) for Carcinogens and
Maximum Allowable Dose Levels (MADLs) for Chemicals Causing Reproductive Toxicity

^a Where a source or product results in exposures by multiple routes, the total exposure must be considered. For example, the MADL for benzene is exceeded when the absorbed dose exceeds 24 µg/day. If only inhalation and oral exposure occurs, the benzene MADL is exceeded when: $(\text{oral dose} \div 24 \text{ } \mu\text{g/day}) + (\text{inhalation dose} \div 49 \text{ } \mu\text{g/day}) > 1.0$.

^b Butyl benzyl phthalate MADL was adopted June 25, 2013, Sulfur dioxide MADL was adopted July 11, 2013, Hydrogen cyanide and cyanide salts MADLs were adopted August 8, 2013; however, in accordance with Government Code section 11343.4 the MADLs will become effective October 1, 2013.

^c Levels for male children and adolescents were calculated by application of the default bodyweights specified in Section 25703(a)(8) to the procedure specified in Sections 25801 and 25803, Title 27, California Code of Regulations.

^d Level represents absorbed dose (rounded from 6,525 µg/day). Since 100% of ingested toluene is absorbed, oral dose is equivalent to administered dose. It is assumed that roughly 50% of the dose administered by the inhalation route is absorbed. Therefore the MADL for inhaled toluene is 13,000 µg/day (rounded from 13,050 µg/day), corresponding to an absorbed dose of 6,525 µg/day.
